SUMMARY

First-year B.Sc. Data Science & AI student at IIT Jodhpur with hands-on experience across the full data cycle: cleaning and analysing data, building and deploying machine learning models, and publishing research. Lead Developer at an early-stage startup, with independent commodity market studies and ML competition projects. Seeking Data Analyst / Data Science internships.

EDUCATION

Indian Institute of Technology Jodhpur — B.Sc. Data Science *June 2025 – July 2029*

SKILLS

Languages & Querying: Python, SQL, HTML
Data & Analysis: Pandas, NumPy, SciPy, Matplotlib, Seaborn, Advanced Excel, Power BI, EDA, Data Cleaning, Statistical Analysis
ML & AI: Machine Learning, Scikit-learn, Computer Vision, Feature Engineering, Image Classification, AI Agents (Google AI), Streamlit
Tools: Git / GitHub, Jupyter Notebook, Google Colab, VS Code

EXPERIENCE

Lead Developer, Data Science Focus | Confidential Early-Stage Startup (Remote) *Jan 2026 – Present*

- Own end-to-end data pipelines in Python and SQL, from raw ingestion to structured, analysis-ready outputs.
- Build applied ML solutions for real-world use cases alongside academic coursework, aligned to business needs.
- Translate requirements into technical tasks; lead code reviews and GitHub collaboration; manage timelines in an Agile-style workflow.

Technical Lead | Hackathon Project Team

- Scoped the problem, distributed analytical tasks and guided the team from concept to a working prototype under strict time limits.

PROJECTS

Pneumonia Detection — ML Web Application | Python, Scikit-learn, Pandas, Streamlit | Live Site

- Handled preprocessing, feature engineering, model selection and evaluation independently, then deployed a publicly accessible ML-based web application.

Silver Market Volatility Analysis | Python, Pandas, NumPy, Matplotlib, Seaborn, Excel | View Analysis

- Identified a ~25% single-session price crash and isolated concurrent macroeconomic signals to separate structural shifts from short-term noise.
- Applied rolling-window trend analysis and momentum indicators; documented methodology and limitations in a report published on LinkedIn.

Copper Market Forecasting & Analysis | Python, Pandas, Matplotlib, Excel | View Report

- Analysed multi-period pricing data for demand-driven volatility patterns and price cycles; built preprocessing pipelines and trend visualisations.

Video Frame Reconstruction using ML | Technex ML Competition, IIT BHU (2025) | Python, Computer Vision

- Restored the temporal order of shuffled video frames using inter-frame feature extraction and visual similarity scoring.

AI-Generated Image Detection | ET-Gen AI Hackathon | Python, Machine Learning, Computer Vision

- Built a binary classifier using texture and frequency-domain features, guided by GAN artefact and noise analysis.

AI Agents Intensive Program | Python, Google AI | Post

- Built and deployed autonomous AI agents using Google's frameworks, covering agent orchestration and tool-calling.

Study Zone — Free Learning Platform | HTML, CSS, JavaScript, YouTube Data API | Live Demo

- Built and deployed a distraction-free web app that surfaces quality educational videos using an external API.
